

Claims

1. A seamless glove of high support performance knitted by a flat knitting machine, wherein the seamless glove has a base knitted fabric set up
5 knitting from a tip of finger toward a mouth or from the mouth toward the tip of finger and knitted in such a manner that respective fingers, a four-finger body, a five-finger body are knitted on a rib knit structure basis using a stretch elastic yarn, and wherein an elastic yarn in a tensed state is inlaid in the base knitted fabric.
- 10 2. The seamless glove of high support performance according to Claim 1, wherein the base knitted fabric is knitted on a rib jacquard structure basis.
3. The seamless glove of high support performance according to Claim 2, wherein the knitting sets up from the tip of finger toward the mouth,
15 wherein the inlay yarn is knotted at least at a location at which the knitting of the finger starts and at a finger crotch part, to prevent cast-off of the inlay yarn, and wherein a front part and a back part of each finger are knitted to be combined with each other by rib knitting of high stitch density so that when the glove is put in a reversed state, a flat gore is formed at the finger crotch part.
- 20 4. The seamless glove of high support performance according to Claim 3, wherein at least a part of the five-finger body on the thumb side is gradually reduced in knitting width by narrowing knitting.
